Epistemic Fortitude: Architectural Specialization for Sycophancy Mitigation in Software Engineering Agents

Gireesh Sundaram, Balaji Venkatesh V, Sundharakumar K B

- Multi-agent architecture mitigates sycophantic behavior in AI systems
- Arbiter agent intervenes when user feedback conflicts with ground truth
- Evaluation on SWE-bench and synthetic tasks shows significant improvements
- Framework balances user satisfaction with epistemic integrity
- Generalizes across multiple state-of-the-art language models
